Ex. No.:3	Intelligent Email Assistant	URK23CS1019
7-10-2026		

Aim:

To develop an Intelligent Email Assistant using Ollama that generates context-aware customer replies by analyzing previous email interactions.

Problem Statement:

Develop an AI-powered Email Assistant capable of understanding customer queries, retrieving similar historical conversations, generating professional responses, improving tone, summarizing conversations, and storing generated replies.

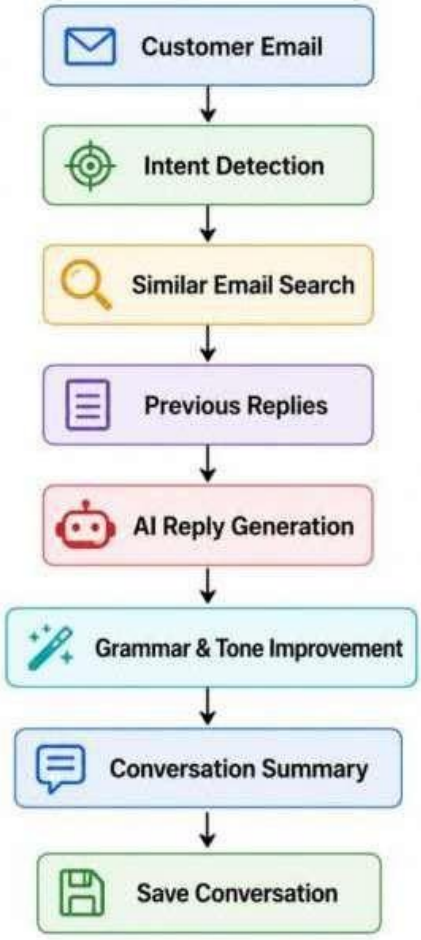

Software Requirements:

Software	Version
Python	3.12
Ollama	0.11.4
VS Code	1.103
Pandas	2.3.2
Sentence Transformers	5.1.0

Input Parameters

Parameters	Description
Customer Name	Name of the customer sending the email
Subject	Subject/title of the customer email
Email	Message or query received from the customer

System Architecture

Module Design

Module	Responsibility
Input Module	Collects customer name, email subject, and customer email from the user.
Intent Module	Uses Ollama with Llama 3.2 to identify the customer's intent such as Delivery Issue, Refund Request, Product Complaint, Technical Support, Order Cancellation, or General Inquiry.
Retrieval Module	Searches the email dataset using TF-IDF and Cosine Similarity to retrieve the most similar previous customer email.
Reply Module	Generates a professional and helpful

	customer support reply using Ollama and the detected intent
Tone Module	Improves the generated reply by making it more polite, empathetic, clear, and professional.
Summary Module	Generates a concise summary of the customer email and the support response.
Save Module	Saves the final AI-generated reply, customer summary into a text file.

Implementation

Output Screenshots:

· Home Screen

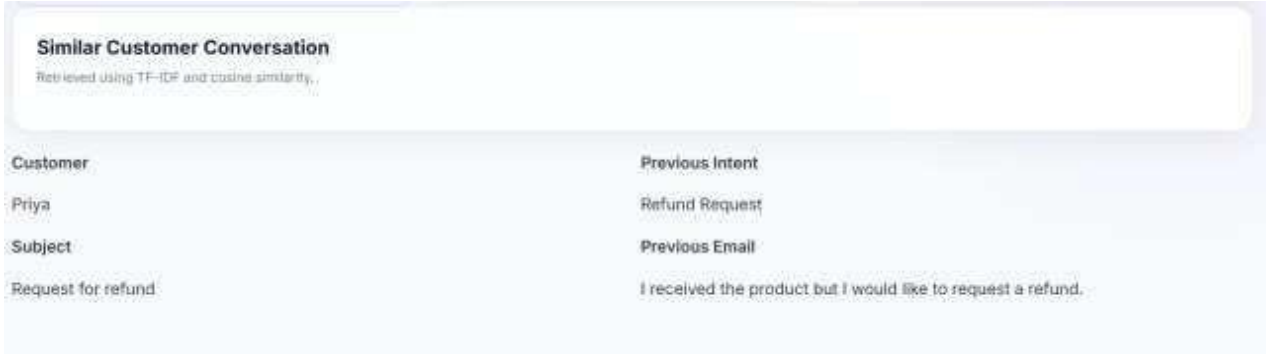

· Customer Email

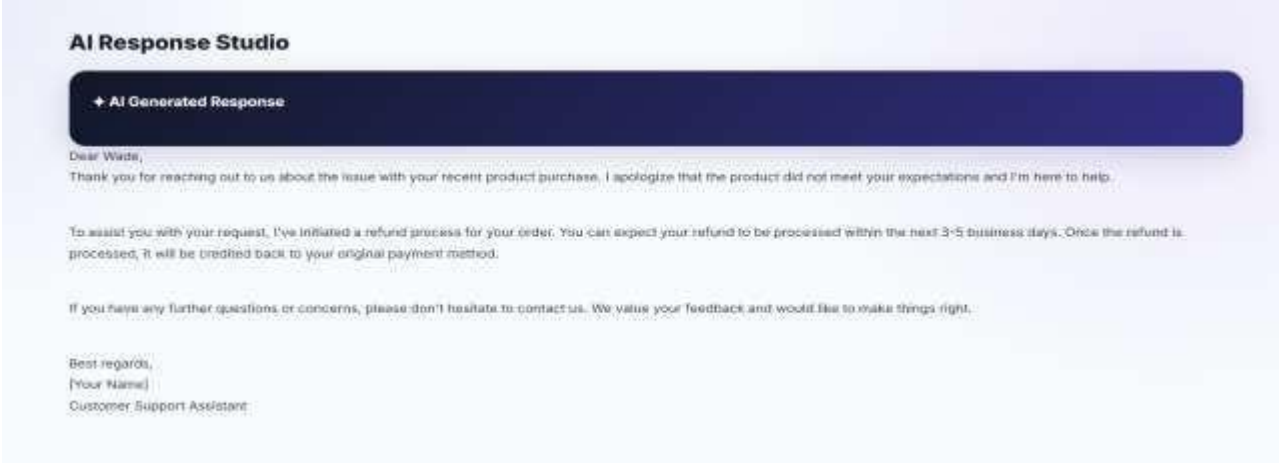

· Intent Detection

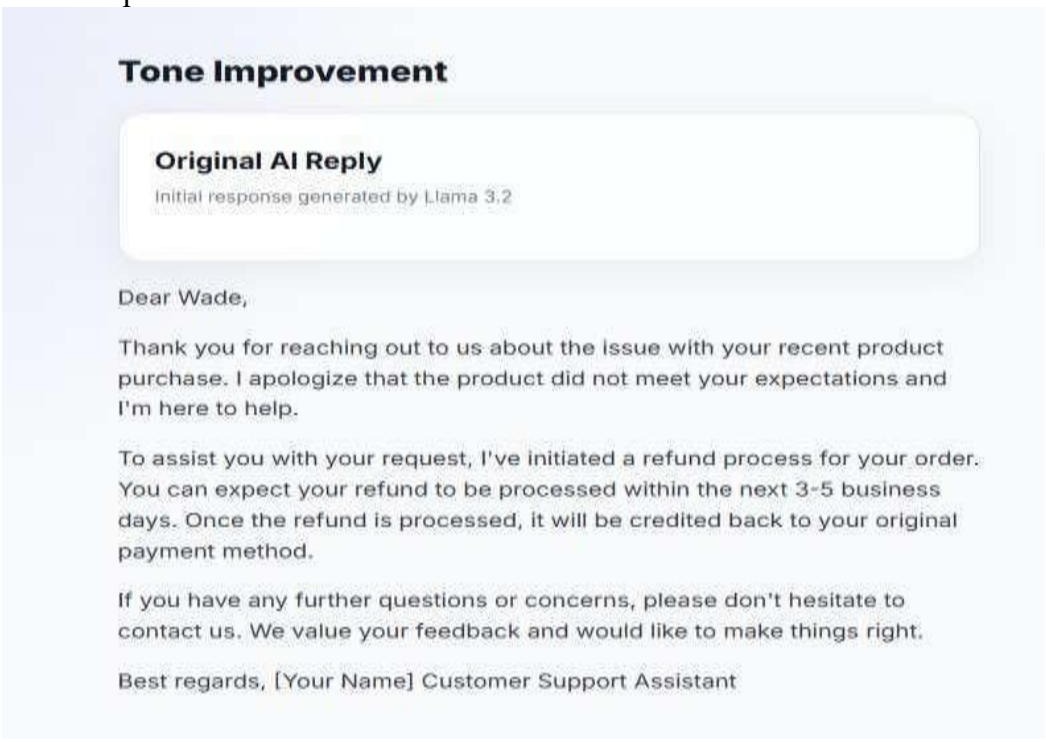

· Similar Email Retrieval

· AI Reply

· Tone Improvement

· Conversation Summary

· Saved Reply

Result:

Thus, an Intelligent Email Assistant was successfully developed using Ollama. The application understands customer emails, retrieves similar historical conversations, generates professional responses, rewrites replies in different tones, summarizes conversations, and saves generated replies locally without requiring cloud-based APIs.
